

12-0-0-26 is a liquid Ammonium Thiosulfate fertilizer that helps increase crop quality and yields by satisfying a crop's essential need for nitrogen and sulfur. Adding Ammonium Thiosulfate to a UAN solution is the economical and effective way to reduce nitrogen loss, by slowing the rate of nitrification.

Advantages

- May be applied through many types of irrigation systems
- Stabilizes and maximizes the nitrogen use efficiency (NUE) of UAN
- Delivers all nitrogen in the ammoniacal form and sulfur in both elemental and sulfate forms
- Increases nitrogen efficiency when added to a side dress program

Is easy to mix and handle

Applications

Most crops need between 20 to 50 pounds of sulfur (8 to 18 gallons of 12-0-0-26) per acre per year depending upon local growing conditions, soil type, fertilizer placement, crop and yield potential. Starter Fertilizer: Row and Vegetable Crops (starter fertilizer) Apply 12-0-0-26 as a band application 2 inches to the side and 2 inches below the seed row at 1 to 3 gallons per acre by itself or in combination with other fertilizers. Row and Vegetable Crops (sidedress) Inject 6 to 12 gallons of 12-0-0-26 per acre to meet the crop's sulfur requirement. If injection applications are made close to the row (less than 12 inches), reduce application rate by half (3 to 5 gallons per acre). For recommendations regarding crops not listed contact your Pritchard Ag LLC representative.

CAUTION: KEEP OUT OF REACH OF CHILDREN. This product is harmful if swallowed. Avoid contact with eyes, open cuts, or sores. Keep from freezing. If this product is stored in cold or freezing weather it may separate or thicken; this will not harm the performance. If frozen or cold, warm the product to room temperature and stir thoroughly before using.
